Example

Question 1. Do you think winning is the most important goal for playing games?

While winning can be a motivator and source of satisfaction, it is not the sole focus in games, I think.

Answer

The importance of winning varies depending on the context and individual perspective. In competitive games, winning may be a goal, but it is also essential to value the process, personal growth, and even a great socializing experience, teamwork and cooperation.

Reason

For example, some games are highly competitive such as eSports or multiplayer online battle arena; in such cases, winning is often a central focus. On the other hand, there are games designed to open-world exploration, puzzle-solving, or immersive storytelling experiences, so winning is not a fundamental goal, and players can derive satisfaction from the journey.

Example(s)

Moreover, excessive focus on winning can negatively impact children's self-esteem if they don't perform as well as expected.

Consequence

Exam tips

a. Buying time	• That's a very interesting/ tough question. • I've never thought about this before. • To be honest, it's not an area of my interest.
b. Using a statement	• I have to admit that I don't know much about this topic, but I think ... • As far as I'm concerned,
c. Claiming to have many ideas	• There are a myriad of reasons why..., chief among these is • The reasons vary, but I guess the most ... one is that

Opinion

Sample

Well, I would have to say that it really depends

because personal preferences differ from one to another, and both types of games offer unique benefits and can contribute to a well-rounded experience for children.

For more specifically, some kinds of indoor games such as board games, or puzzle-solving can help children boost cognitive development as they need to calculate scores or make strategic moves based on probability and statistics. Regular engagement with such games can enhance math and logic skills. On the other hand, outdoor games often involve more physical movement and exercise, promoting a healthier and more active lifestyle for children. As a result, it can help strengthen their immune system and stamina.
